

COMPARING THE COMMON WOOD FENCE MATERIALS

PRE-STAINED CEDAR

BEST. NATURALLY AND CHEMICALLY PROTECTED

Premium cedar pickets arrive factory pre-stained for consistent color and added protection. Cedar is naturally resistant to decay and provides a beautiful, upscale appearance. Pre-staining eliminates the need to stain immediately after installation, making this our most complete, ready-to-install wood fence option.

RAW CEDAR

BETTER. NATURALLY PROTECTED

Raw cedar offers the natural beauty, dimensional stability, and decay resistance cedar is known for, while giving the customer freedom to choose their own finish. It can be left natural to weather to a silver-gray or stained to achieve the desired color and added protection. A premium choice with more finishing flexibility.

PRESSURE TREATED PINE

GOOD. CHEMICALLY PROTECTED

Pressure-treated pine provides a strong, dependable fence at a more economical price point. The wood is pressure treated with preservatives to help protect against rot, decay, and insects. It can be stained after the lumber has properly dried, making it a practical choice when value and durability are the priority.
